InstaYield

INSTANT UPFRONT YIELD

InstaYield introduces an exciting and innovative concept called "time traveling" with money, made possible by the power of blockchain technology. Imagine being able to receive the future value of your money today, without having to wait for yields to accumulate over time.

InstaYield

1. Select **staking amount**
1.00005
25% 50% 100%

InstaYield

TIME TRAVEL CONCEPT POWERED BY VENOM

To get started, choose the Staking Protocol of your choice.

Enter the amount you wish to stake and select the duration.

Once you've entered all the necessary information, your Instant Yield will be calculated and displayed in the third step.

Finally, confirm your choices and receive your upfront money!

InstaYield

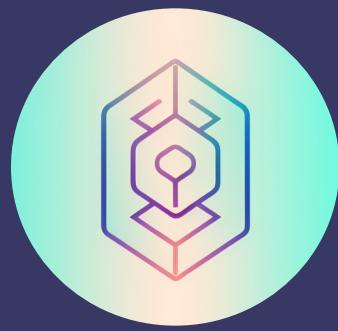

STRATEGIES AT INSTAYIELD

Strategies determine where the staked tokens are directed and how upfront yield is generated when burning instaTokens.

Strategies can be developed and registered by individuals or entities, and InstaYield selects which strategies are listed on the platform's frontend. Each strategy is designed to interact with specific protocols or mechanisms, such as AAVEv3, to leverage their features and generate attractive yields for investors.

By implementing strategies, InstaYield provides investors with a range of options and opportunities to maximize their returns while maintaining a secure and efficient staking environment.

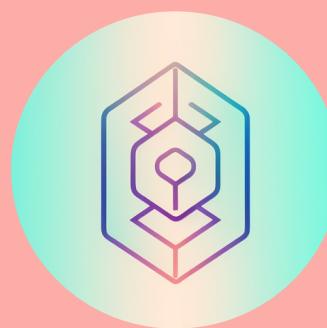

InstaYield

SECURITY

At InstaYield, the main focus is on keeping things secure. We took several steps to ensure safety, such as:

- Making sure that user funds are always fully backed.
- User funds cannot get liquidated.
- Providing users with exact information on when their initial investment will be accessible, right down to the minute.
- Allowing users to retrieve their initial investment whenever they want by paying back a portion of the upfront earnings.

InstaYield

FUTURE

Governance and Voting:

We want to introduce a governance mechanism where InstaYield token holders can participate in decision-making processes. This could involve voting on protocol upgrades, introducing new Time Vault strategies, or determining the allocation of platform fees.

Cross-Chain Compatibility:

The goal will be exploring interoperability with other blockchain networks to expand the reach of InstaYield. By connecting with multiple blockchains, users can have more options for staking and accessing upfront yields, regardless of the underlying blockchain technology.
